

Ultraline HMPE USD 3

Construction

Ropes of the ULTRALINE range are of a circular braid design and they have been developed to give a rope extra protection against wear and tear without significantly changing the primary characteristics. It is a logical development from the double-braid, where the outer braid both protects the inner braid and contributes to the strength. In the circular braid design this duality has been abandoned. The cover is optimised for wear and abrasion resistance and the core(s) are optimised for strength. This results in both a higher strength and a better design life.

Each of the cores consists of a three-strand rope that will be produced in both right-hand lay and left-hand lay. The sub-ropes will be laid parallel to each other. The lay-up of the sub-ropes is such that the finished rope will have a torque-balanced construction.

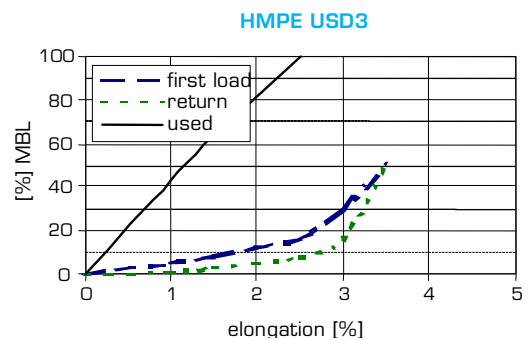

Material Properties

Polyethylene is an amorphous plastic with relatively low tensile strength. Through gel spinning the crystals achieves a maximum orientation, this give the material a high strength and stiffness. And it is commonly known as **H**igh **M**odulus **P**oly**E**thylene. It has an extremely low coefficient of friction and is extremely resistant to internal and external abrasion. The thermal properties of HMPE are comparable to ordinary Polyethylene. HPME is also prone to cold flow.

Features

➤ Materials	HMPE (high modulus Polyethylene (Dyneema SK75))
➤ Construction	load-bearing cores with a cover of composite yarn
➤ Treatment	On request
➤ Colour of Rope	White
➤ Approx. Spec. Density	0,975 floating
➤ Melting point	145°C
➤ Abrasion Resistance	Excellent
➤ U.V. resistance	Excellent, due to jacket
➤ Temperature resistance	70°C max continuous
➤ Chemical resistance	Excellent
➤ Dry & wet conditions	Wet strength equals dry strength
➤ Range of use	towing, salvage, mooring, installation
➤	SK 78 on request Technical specifications identical to SK 75. Improved creep behaviour
➤ Coil length	220m
➤ Spliced strength	± 10% lower
➤ Weight and length tolerance	± 5%
➤ Diameter	± 2%

Dia mm	Circ. inch	Min Break Load		Weight
